

ABOUT US

Established in 2018, Evry Network aims to provide open-source financial products and services for everyone. EvryNet aspires to provide a platform to build smart contract solutions with no boundaries and to offer interoperable CeDeFi services to achieve the future of Financial Inclusion and Financial Mobility.

Co-Founder & Chief Scientist

John Ng Pangilinan
Signumber Capital,
Managing Partner

Paul Veradittakit
Pantera Capital,
Partner

Prof. Robert Townsend
Massachusetts Institute of Technology
Economic Advisor

KEY FEATURES

Interoperable with major blockchain

Currently compatible with ERC-20, BEP-20 and Stellar, with many more to come

Tendermint consensus protocol

Proof-of-stake consensus mechanism to enhance speed while maintaining security

Static gas price model

Fixed gas price with adjustments allowed through network voting

Unlimited possibilities

Existing real world financial practices provide a basic template for developers to build applications on

Smart contracts for institutions

Institutional-targeted features such as multi-sig, and allowing for the contract provider to pay gas fee for the end user

Decentralized Custodian

On-chain custodian/virtual swap protocol and wallet that provides interoperability between chains via a virtual swap of digital assets.

Micro-Escrow Service

Escrow service for social commerce and on-chain payments for Southeast Asia and beyond.

PRODUCTS

evry.finance

DApp with comprehensive list of financial products and services, including decentralized exchange, liquidity pool, lending & borrowing, mutual fund, synthetic asset, NFT market, dedicated section for institutional investors (with highly-liquid financial products), total return swap, convertible perpetual security, and other advance financial products.

evryhub

A platform for cross-chain asset transfer, bridging digital tokens between Evrynet and other blockchains

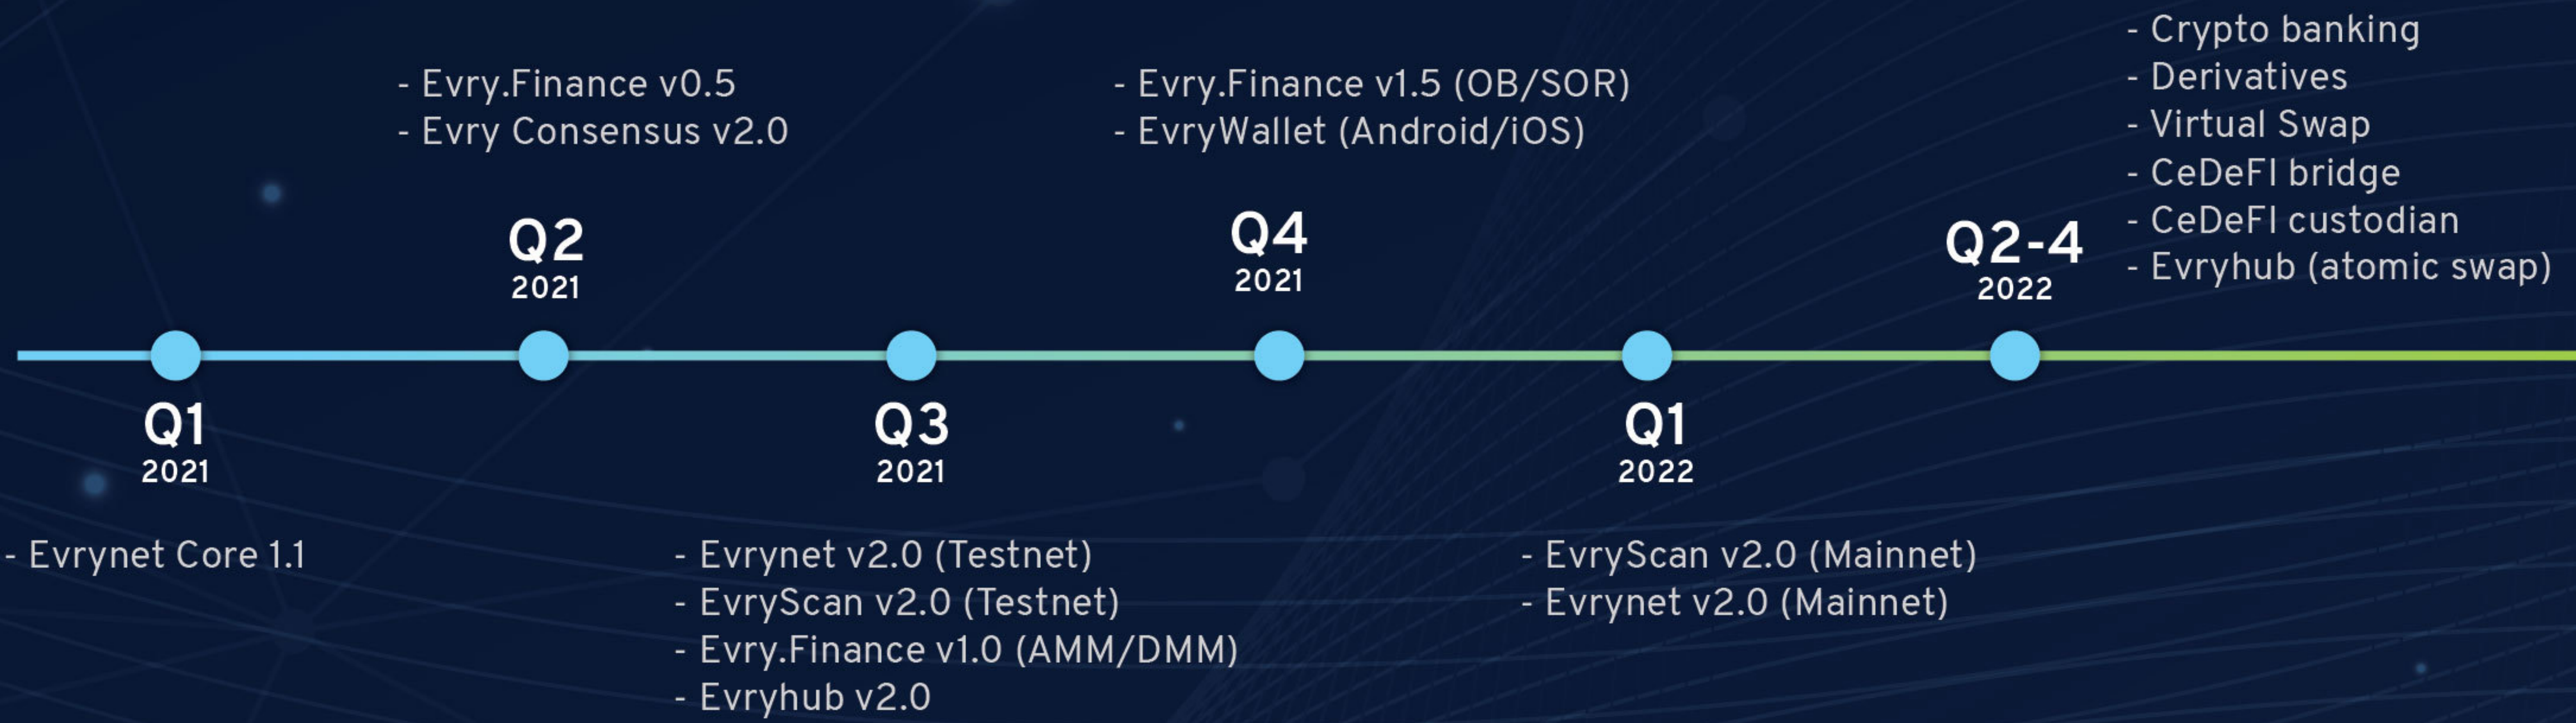

evryscan

Evrynet's native blockchain explorer

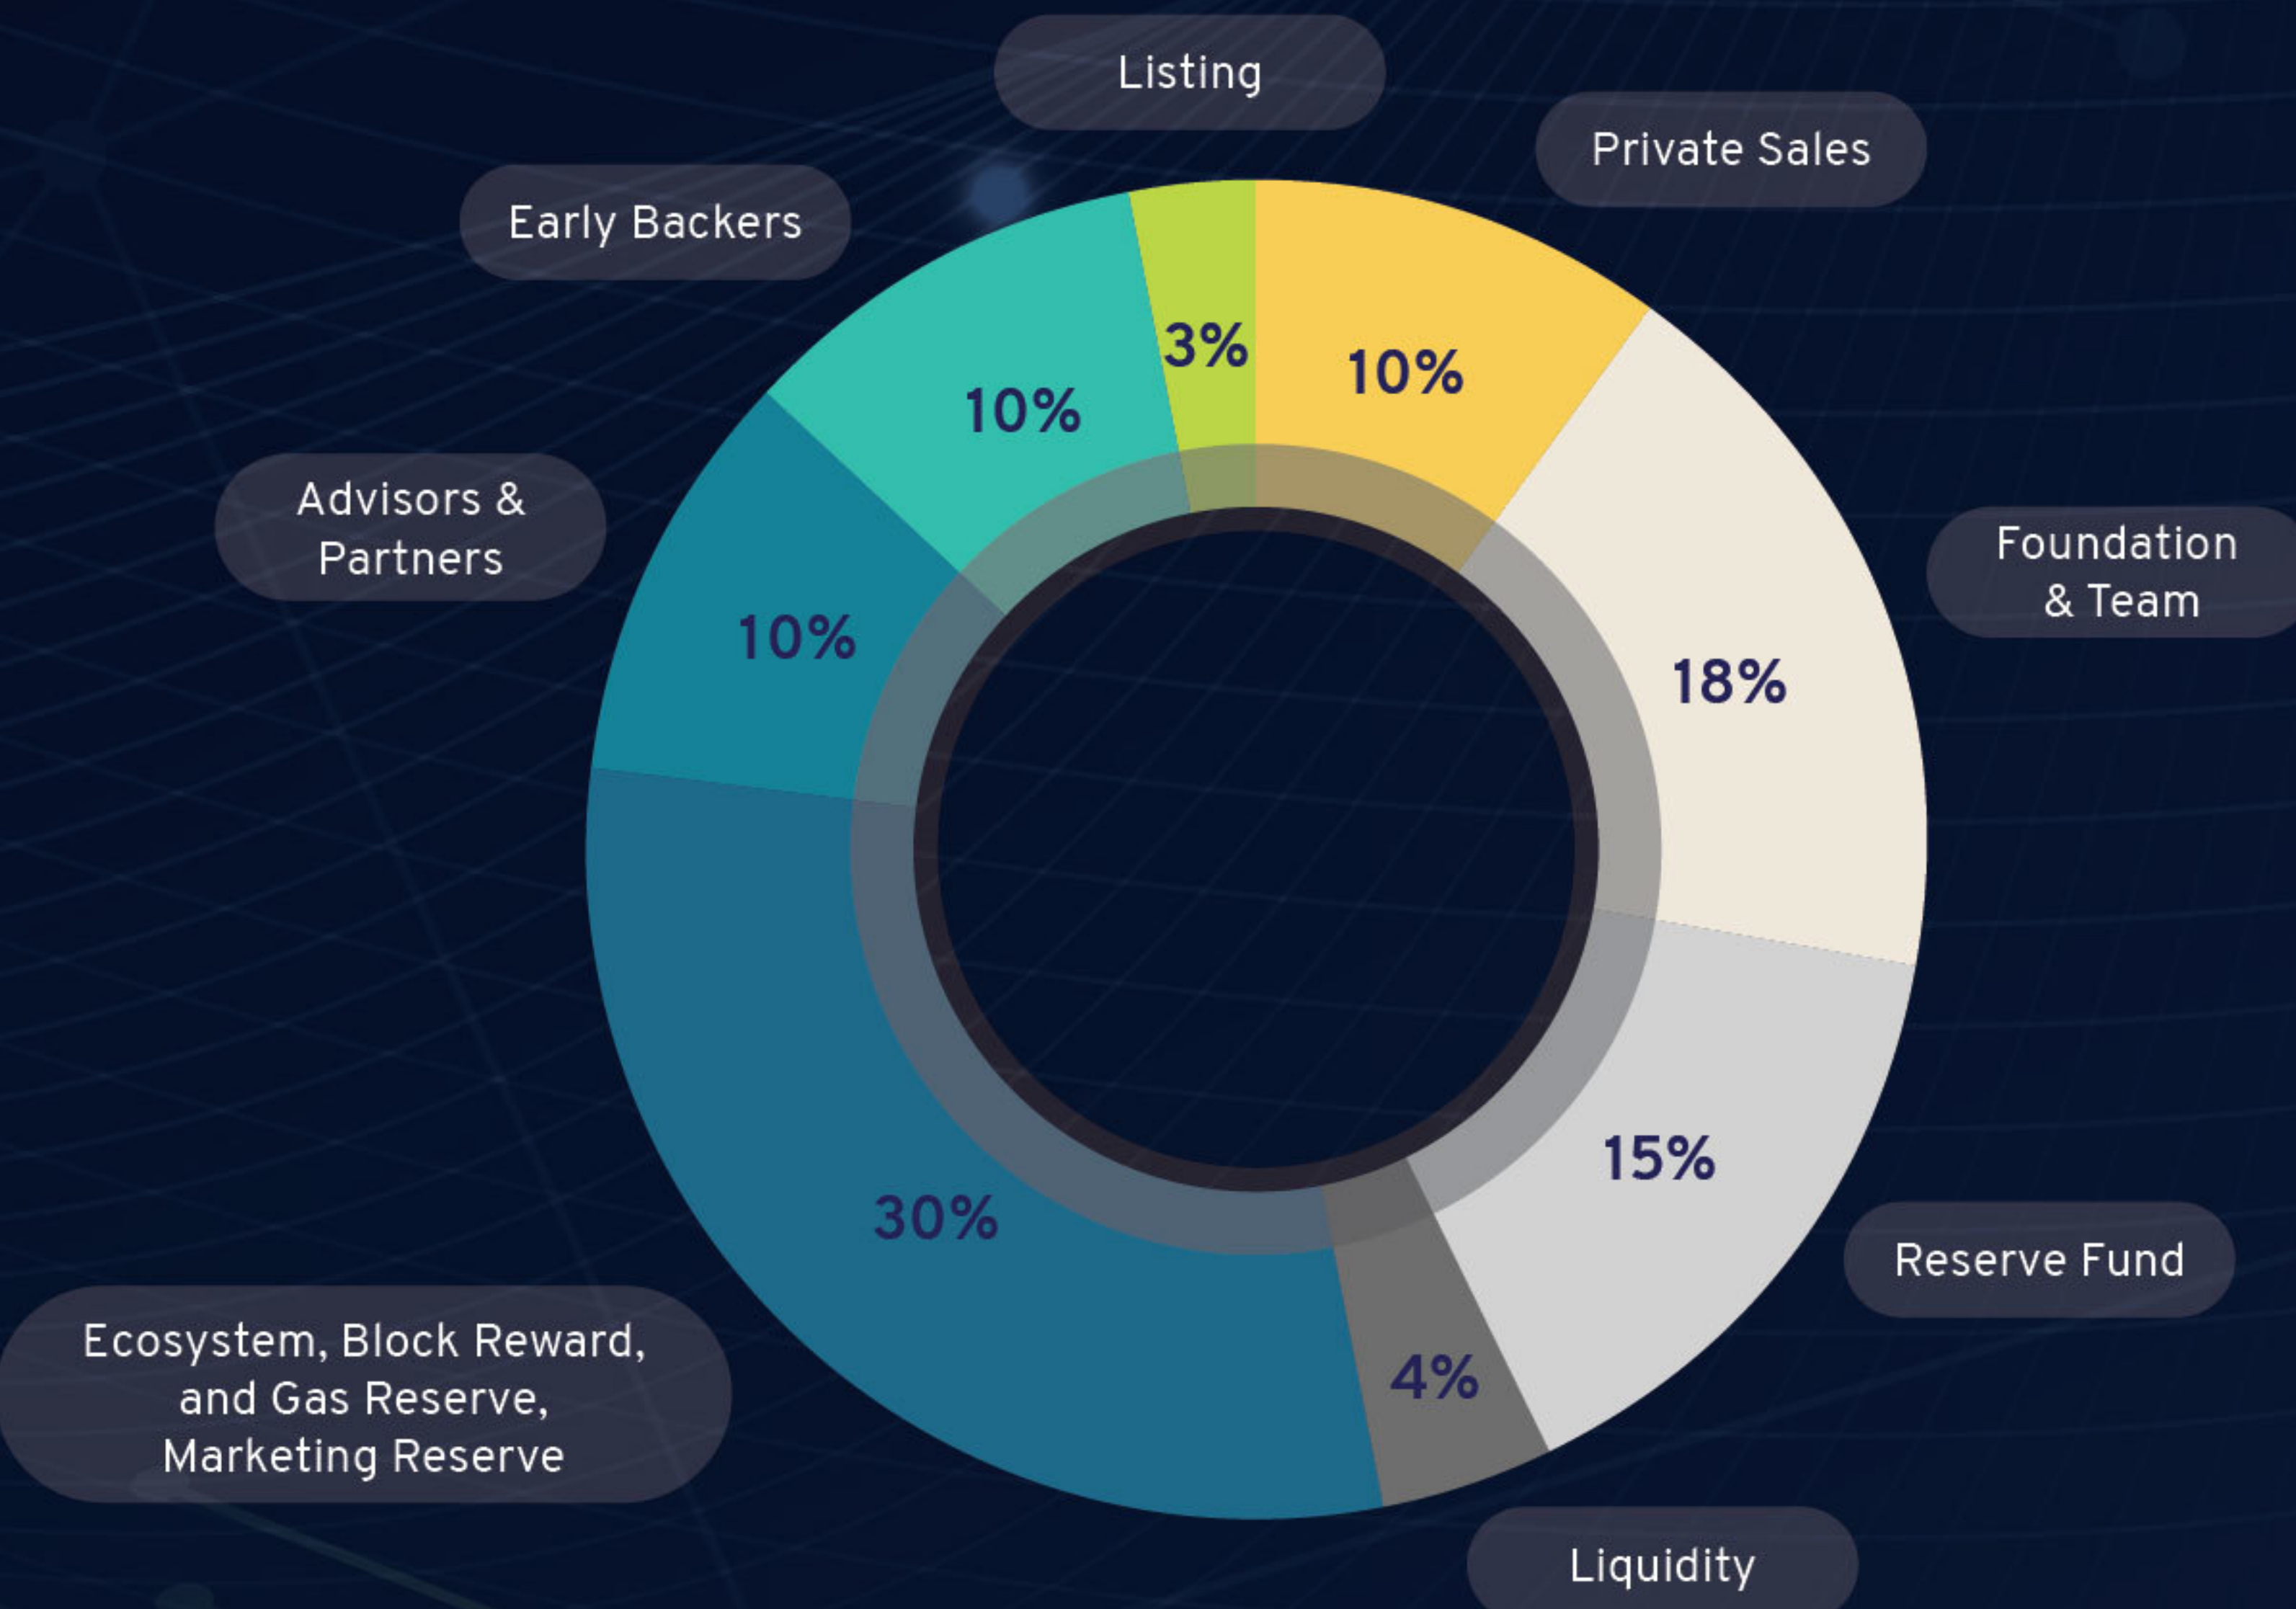

evrywallet

Multi-chain crypto wallet for storing, sending and receiving digital currencies

ROADMAP

TOKENOMICS

EVRY TOKEN UTILITY

- Native asset of Evrynet
- Gas fee for dApps and Defi projects on Evrynet
- Base token for liquidity pool (yield farming)
- Base token for swap on decentralized exchange
- Base collateral and asset for lending
- Collateral stake for validator nodes
- Delegated vote on network governance
- Block reward for validator nodes
